## PROFILE

Statistics graduate from Addis Ababa University with practical experience in R, Excel, SPSS and QGIS, supported by academic and personal projects in data preparation, predictive modeling, time-series forecasting and analytical reporting. Skilled at translating complex data into clear visualizations and evidence-based insight, with strong interests in information management, spatial statistics and responsible AI-assisted analytics.

## SKILLS

### Data & statistical tools

R Programming (tidyverse, ggplot2),  
Microsoft Excel, SPSS and KoboToolbox.

### GIS & mapping

QGIS for spatial-data preparation, thematic  
mapping, visualization and map layouts;  
basic ArcGIS knowledge.

### Reporting & design

Microsoft Word, PowerPoint, Google Sheets,  
Canva and Adobe Express.

### Working environments

Windows and Linux.

### Core capabilities

Data cleaning, statistical modeling,  
visualization, analytical reporting,  
reproducible workflows and evidence-based  
communication.

## LANGUAGES

|         |        |
|---------|--------|
| Amharic | Native |
| English | Fluent |

## PROFESSIONAL INTERESTS

Information management, AI-assisted  
analytics, spatial statistics, statistical  
computing and evidence-based reporting.

## HOBBIES

Hiking, football, basketball, photography  
and reading novels.

## EDUCATION

### Bachelor of Science in Statistics

Addis Ababa University | Graduated 2026

Relevant coursework: Statistical Inference, Regression Analysis, Time Series Analysis,  
Probability, Sampling Techniques, Experimental Design, Data Management, Operations  
Research, Multivariate Analysis, Econometrics, Survey Methodology, Biostatistics, Statistical  
Computing, Applied Spatial Statistics and Demography.

## SELECTED PROJECTS

### Customer Churn Analysis & Prediction Using R

Personal project

- Prepared raw customer data, documented exclusions and explored relationships between  
customer characteristics and churn behavior.
- Combined statistical inference, interpretable logistic regression and held-out evaluation of  
logistic regression, decision tree, random forest and XGBoost models.
- Analyzed 7,032 complete observations; the best held-out model achieved a ROC-AUC of  
0.853.
- Built a reproducible R workflow and published code, documentation and reports on GitHub.

### Entropy-Based Binning in R (From Scratch)

Addis Ababa University project

- Researched Shannon entropy, information gain and the MDLP stopping criterion; verified  
calculations manually before implementing recursive discretization in R.
- Evaluated bin quality quantitatively and compared the approach with baseline  
alternatives.

### House Price Prediction | Regression Analysis

Addis Ababa University project

- Modeled a complex synthetic dataset with mixed predictor types and severe  
heteroscedasticity, applying transformations and residual diagnostics to improve  
robustness and interpretation.

### Traffic Accident Analysis | Time-Series Forecasting

Addis Ababa University project

- Applied Box-Jenkins methodology and ARIMA modeling to evaluate trends, detect  
seasonality, assess diagnostics and forecast future accident occurrences.

## EXPERIENCE & ACTIVITIES

### Event Co-organizer & Photographer - Liter Events

Ongoing

Contribute to event planning, participant coordination, on-site delivery, photography and  
visual-content creation.

### University Basketball Team Player - Addis Ababa University

University activity

Balanced training and competition with academic responsibilities while strengthening  
teamwork, discipline, resilience and communication.
